INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/EP2004/014016

-		ov No. 1. Do. 1. City		
-		ox No. I Basis of the report		
1	. W	Ith regard to the language , this report is based on the international application in the language in which it was ed, unless otherwise indicated under this item.		
		This report is based on translations from the original language into the following language, which is the language of a translation furnished for the purposes of:		
		 □ international search (under Rules 12.3 and 23.1(b)) □ publication of the international application (under Rule 12.4) □ international preliminary examination (under Rules 55.2 and/or 55.3) 		
 With regard to the elements* of the international application, this report is ba have been furnished to the receiving Office in response to an invitation unde report as "originally filed" and are not annexed to this report): 		ith regard to the elements* of the international application, this report is based on <i>(replacement sheets which</i> ave been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this port as "originally filed" and are not annexed to this report):		
	De	scription, Pages		
	1-2	as originally filed		
	Claims, Numbers			
	1-1	6 as originally filed		
	Drawings, Sheets			
	1-1	0 as originally filed		
		a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing		
3.		The amendments have resulted in the cancellation of:		
		the description, pages		
		☐ the claims, Nos. ☐ the drawings, sheets/figs		
		the sequence listing (specify):		
		any table(s) related to sequence listing (specify):		
4.	had	This report has been established as if (some of) the amendments annexed to this report and listed below not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the oplemental Box (Rule 70.2(c)).		
		the description, pages		
		the claims, Nos. the drawings, sheets/figs		
		☐ the sequence listing (specify):		
		any table(s) related to sequence listing (specify):		
	*	If item 4 applies, some or all of these sheets may be marked "superseded."

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/EP2004/014016

Reference is made to the following documents:

- D1 Amit M et al., Developmental Biology 15 November 2000, 227(2), 271-278
- D2 WO 03/055992 A (Cell Therapeutics Scandinavia AB) 10 July 2003
- D3 Pickering S J et al., Reproductive Biomedicine Online October 2003, 7(3), 353-364
- D4 Reubinoff B E et al., Nature Biotechnology April 2000, 18(4), 399-404
- D5 Xu C et al., Nature Biotechnology October 2001, 19(10), 971-974
- D6 Heins N et al., Stem Cells May 2004, 22(3) 367-376

Re Item II

Priority

The priority date of 8 December 2003 can be acknowledged for subject-matter deriving from present examples 1-5, 7 and 8, except those parts relating to clones of the SA002 cell line. Consequently, D6, a publication of the invention, does not belong to the state of the art under Rule 64 PCT.

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

D1 reports on the first clonal derivation of human embryonic stem cells (hES, a designation synonymous with "blastocyst-derived stem cells"; this Authority observes that the inventors used "hES" and not "hBS" in their publication D6). In the protocol of D1, regarded as the closest prior art, colonies are dissociated using collagenase (p. 272, top of right-hand column).

D3 reports on the derivation of a new hES cell line. In the derivation protocol, colonies are mechanically cut for derivation (p. 355, right-hand column), but are not dissociated in this way into single cells. Regarding the preparation of the hES themselves, reference is made to D4, in which "colonies [are] propagated in clumps of ~100 stem-like cells." (p. 403, right-hand column) Thus it appears that hES were not derived down to single cell clones in either D3 or D4.

D2 and D5 provide further background art on, respectively, the preparation of (non-clonal) hES from blastocysts and feeder-free growth of hES in MatrigelTM.

The subject-matter of claim 1 is new and not obvious in view of the prior art (Article 33(2,3) PCT), since no method of clonal derivation of hES involving non-enzymatic treatment has been reported and the prior art fails to teach or even suggest that hES clumps could be dissociated into single cells solely by use of non-enzymatic means. Mechanical dissociation of hES clumps, as used in D3 and D4 does not yield single cells and, as such, would be unsuitable to replace collagenase digestion in the protocol of D1; there is no suggestion to add further non-enzymatic steps, such as the use of a chelator. Claims 2-16 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to

novelty and inventive step.
